CHEMSHIELD™

DESCRIPTION

ChemShield is a protective film that can be applied to one or both sides of Lumicor panels to increase chemical and stain resistance. This protective layer will not fade or streak even after heavy cleaning.

Chemshield is ideal for use with vertical applications where the resin will need to be cleaned frequently such as high traffic areas or those where cleaning is performed daily for sanitary reasons.

ChemShield protects against common staining agents, such as food, ink, and grease. ChemShield also protects panels from limited surface exposure to many acids, bases, and solvents.

DÉCORS

ChemShield is appropriate for all décors in every Lumicor collection. Choose from over 250 décors in an endless number of combinations.

FINISHES & ADD-ONS

A Satin finish is recommended for panels with ChemShield. If scratched or damaged, the panel cannot be refinished without losing its chemical and stain resistance.

GAUGES

ChemShield may be added to any available gauge of Lumicor panels, from 1/16" to 1" (1.5 mm - 24 mm).

RESINS

ChemShield may be applied to one or both sides of Lumiclear™. It is not available for use with Lumiform™.

SIZES

Chemshield may be added to the following sheet sizes:

- 48" × 96" (1219 × 2438 mm)
- 48" × 120" (1219 × 3048 mm)

FABRICATION

Sheets with ChemShield may be cut, formed, and finished. ChemShield is not applied to the edges so all edges must be protected from chemical exposure.

APPLICATIONS

Use for vertical applications where panels are cleaned with chemicals routinely, or are in high-touch areas. For horizontal applications such as tabletops or countertops, use Lumiguard.
