

# WALL PROTECTION

by Lumicor.

## DESIGN AND FUNCTIONALITY

Lumicor Wall Protection combines beautiful aesthetics with high-performance resin and a durable finish, resulting in versatile, practical wall cladding.

In response to industry needs for biophilic design options and wall protection suitable for front of house applications, we have carefully curated a collection of organic, botanical materials and sophisticated textiles. Each .050" gauge panel is backed with a neutral opaque and can be paired with various trim styles and colors.

This product line features a Class A fire rating, at least 40% recycled content, and a durable satin finish applied to every panel. For projects on a tight timeline, check out our Fast Track options which are guaranteed to ship within three business days.

Never again sacrifice design for durability in your healthcare, education, government, retail, and corporate spaces.
