# FIN CEILING FEATURES

From crisp, modern edges to rolling, whimsical waves, Fin Ceiling Features by Lumicor bring color, movement, and rhythm to contemporary interiors. Create a splash with a single feature or design a large-scale installation with multiple features aligned end to end. With five profile shapes available in 28 Luminous colors, Fin Ceiling Features offer versatility to suit any design aesthetic.

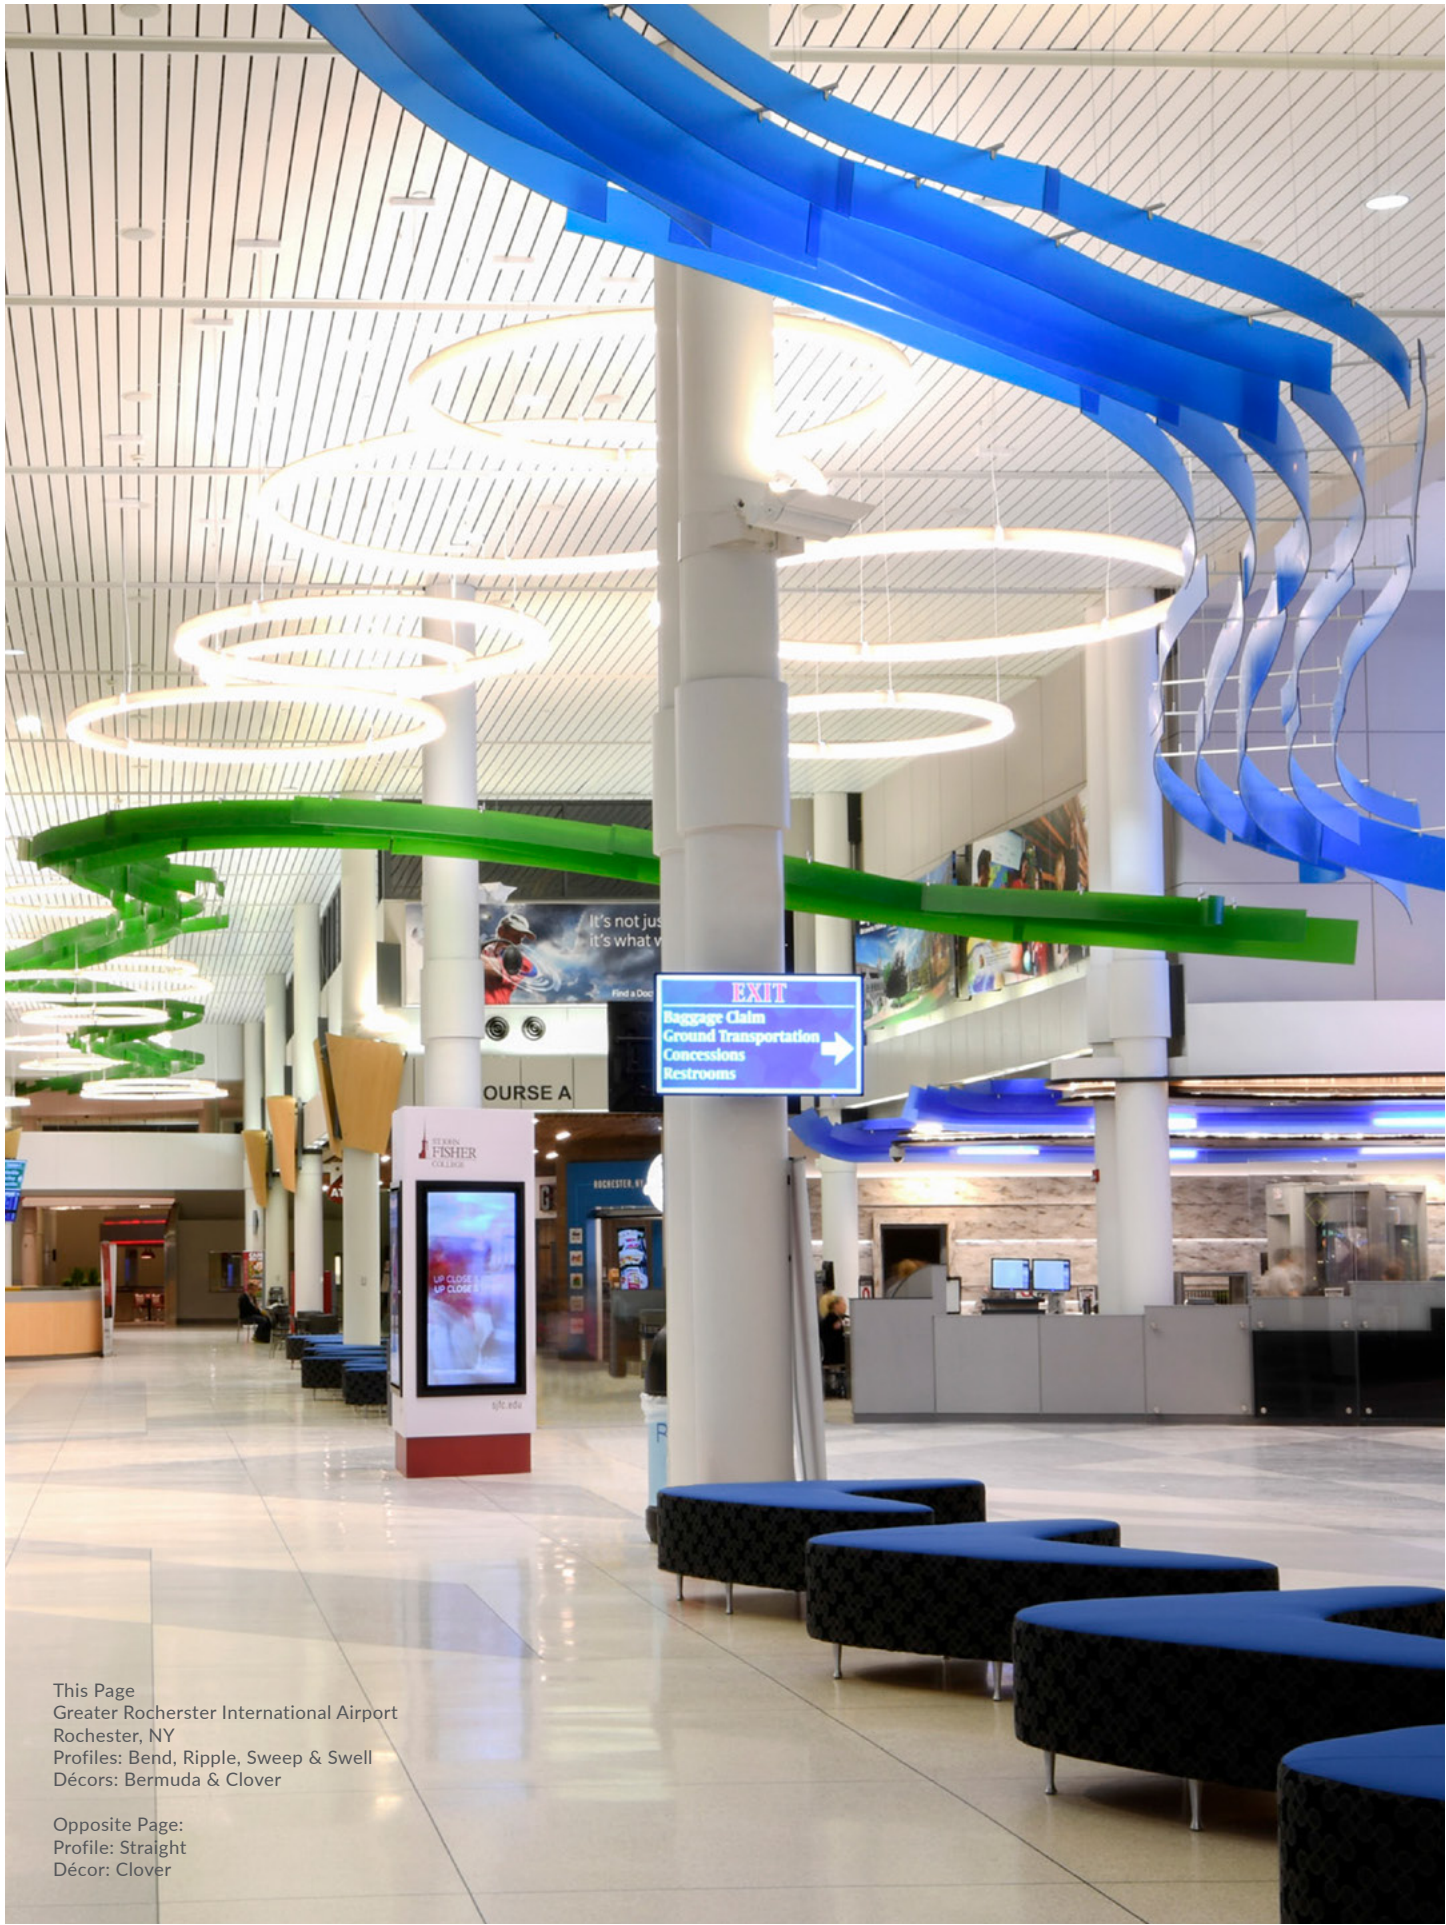

## FLEXIBLE DESIGN

Fin Ceiling Features are an infinitely scalable kitted solution, making them ideal for spaces both intimate and expansive. Single features create focal points in small areas while tailored configurations of multiple features aid in wayfinding and division of space.

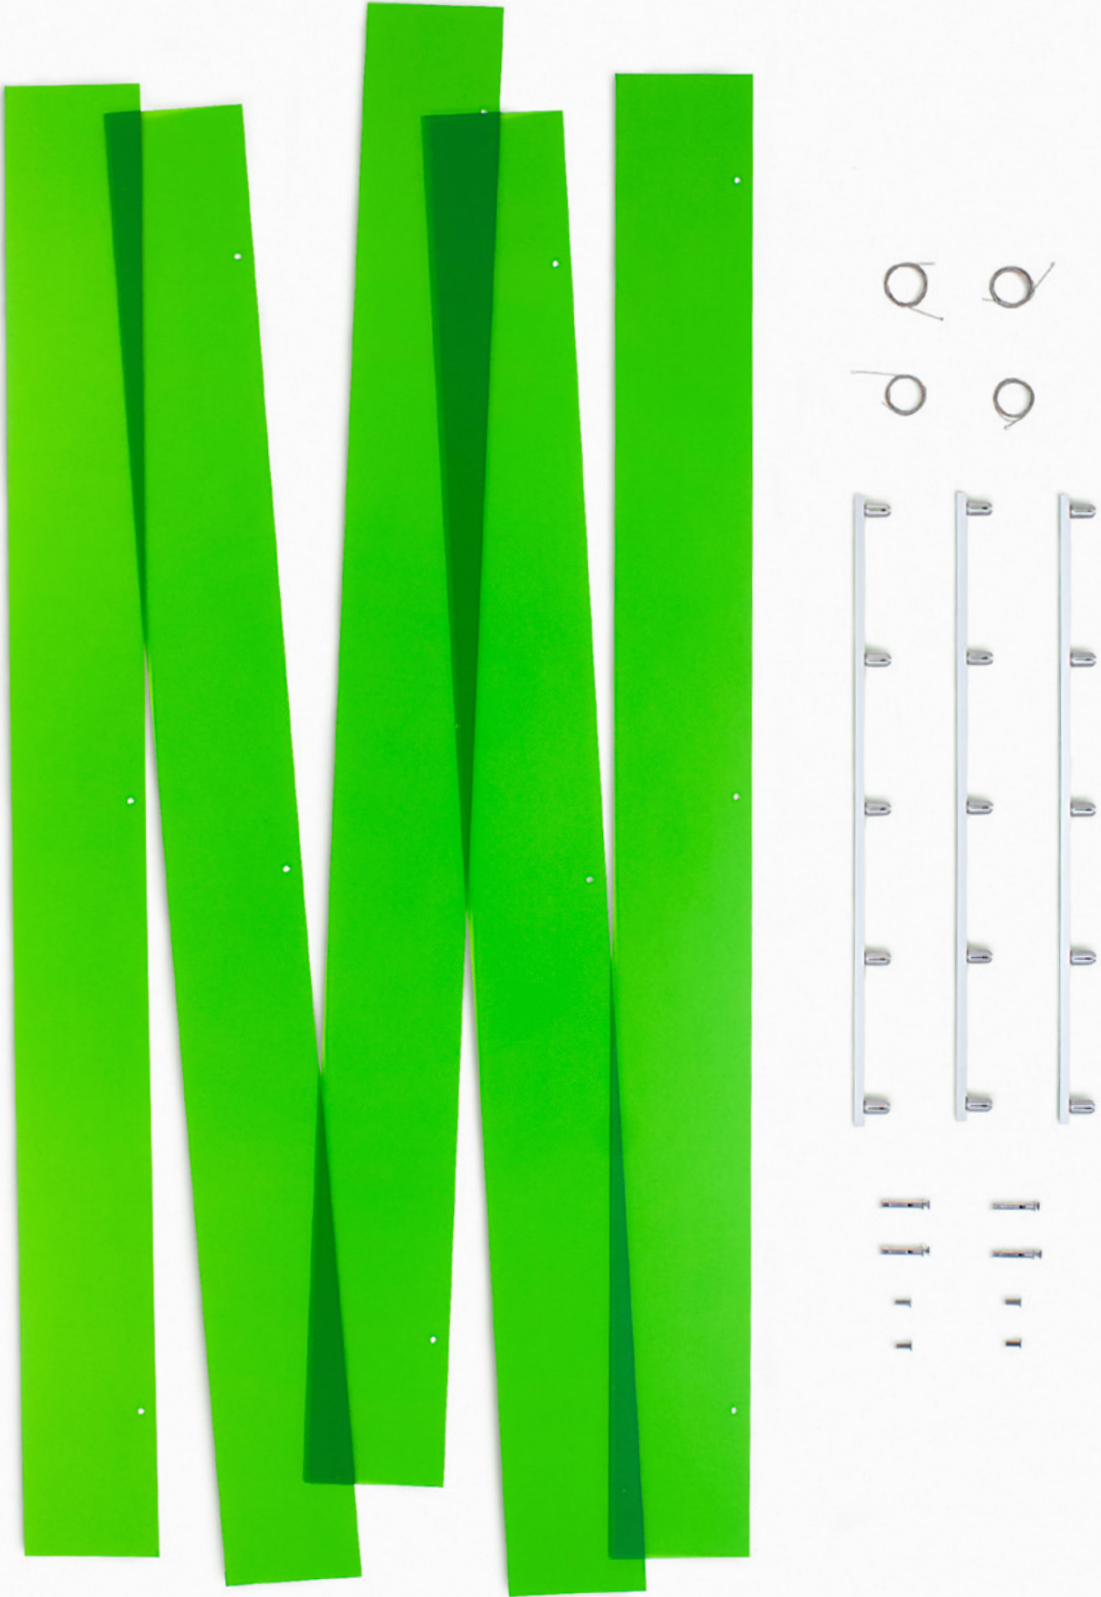

The same simple hardware system is used universally for all Fin Ceiling Features, allowing for further customization opportunities. Create multicolored features simply by mixing and matching fins from other kits of varying hues. Easy to adjust suspension cables can maneuver around fixed building elements and allow for features to be installed at an angle; height adjustment takes mere seconds.

# ORDER A KIT

Fin Ceiling Features are fully kitted, simple to assemble, and easy to install. Each kit contains our straightforward system of minimal hardware and five colorful fins. Our lightweight fins are made of non-porous Lumiform Resin, providing a Class A fire rating in addition to superior cleanability, durability, and an impact strength 40x greater than glass.

# PROFILES

Available in five profiles and 28 Luminous colors, Fin Ceiling Features were designed with versatility in mind. Features can be installed with the ease of a kitted solution while having the flexibility to be tailored to unique interiors; any of the four thermoformed profiles can integrate into a single installation. For ideal alignment between features, Bend and Swell are offered in both left and right orientations while Sweep, Ripple and Straight align universally.
