

KUVIO PAINTING GUIDELINES

Examine Kuvio tiles to ensure that the contents are as ordered before applying any paint. Painting should be performed by an experienced painter. Paint can only be applied to Kuvio cotton finish.

TOOLS AND MATERIALS

- Water based interior acrylic latex paint and primer in one*
- Professional paint sprayer
- Drop cloth

PREPARATION

- Painting should be performed in a clean environment free of dust.
- Ensure Kuvio tiles are also clean and free of any dust or particulate.
- If dust is present on tiles, remove with a dry cloth.
- Follow the paint and sprayer manufacturer's guidelines for viscosity, methods, and volumes for optimum results.
- If painting multiple colors, Lumicor recommends using a different spray nozzle for each color.
- In a well-ventilated area, lay Kuvio tiles on a drop cloth, spaced approximately 8" apart.
- Paint one test tile first, allow to dry (based on manufacturer's suggested drying times) and inspect the tile to ensure desired results before proceeding with others.

APPLICATION

- Using a professional grade paint sprayer, coat the front and sides of each tile to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage.
- One coat is usually sufficient, but apply touch-ups or a second coat if needed.
- See the manufacturer's recommendations for the paint dry times.
- When dry, proceed with Lumicor's installation instructions.
- Retain paint, or paint code, for any future touch ups.

**For best results, Lumicor recommends using high quality interior acrylic latex paint and primer in one, in matte, satin, or semi-gloss finishes. Our preferred paint is Sherwin Williams Emerald. Minor surface imperfections and irregularities can become more noticeable when using gloss or reflective paint.*
