

# OPAQUE

Opaque is a light-blocking layer that creates a fully opaque panel and comes in 13 neutral tones. Add Opaque to sheets when no light transmittance is desired, such as placing a panel against an unfinished substrate or if there is a need for privacy.

## FINISHES & ADD-ONS

A satin finish is recommended for use with Opaque. Frost finish is not available. Opaque may be used with ChemShield™.

## SIZES

Opaque may be added to these sheet sizes:

- 48" × 96" (1219 × 2438 mm)
- 48" × 120" (1219 × 3048 mm)

## GAUGES

Opaque may be added to any available gauge of Lumicor panels, from 1/20" to 1" (1.5 mm - 24 mm) and adds panel thickness from .001" - .010".

## FABRICATION

Sheets with Opaque may be cut, formed and finished. All standard forms of fabrication may be used.
